

# Threatened Ecological Community: Swamps of the Fleurieu Peninsula

**Fleurieu Swamp Ecosystem**

- Not observed
- Present - Confirmed
- Present - Unconfirmed
- Coastal Conservation Cell

The Swamps of the Fleurieu Peninsula are localised wetlands occurring in high rainfall areas. They are densely vegetated and occur adjacent to waterlogged soils around low-lying creeks and flats. The Swamps are typified by their reedy or heathy vegetation growing on peat, silt, peat silt, or black clay soils.

The Swamps of the Fleurieu Peninsula were listed as a critically endangered ecological community due to the small patch sizes of remaining swamps and their vulnerability to ongoing threats <https://www.dcceew.gov.au>
