

# Threatened Ecological Community:

## River Murray Downstream of the Darling River, and Associated Aquatic and Floodplain Systems

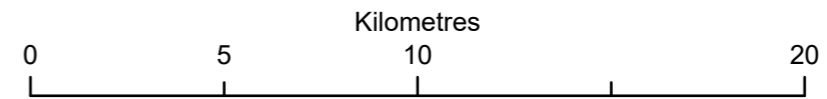

**River Murray-Darling to Sea EC**

- Not Present
- Present
- Coastal Conservation Cell

The 'River Murray downstream of the Darling River, and associated aquatic and floodplain systems' ecological community (EC) is listed as Critically Endangered resulting from combined and long-term impacts from multiple threats that have led to:

- widespread declines or losses of many functionally important species or taxonomic groups, combined with their significant, and at times catastrophic, recruitment failure
- a very severe reduction in ecological community integrity, reductions in biodiversity across a range of taxonomic groups and habitats; significant disruption of key ecological, hydrological, and geo-physical processes; and, conditions that favour invasive species
- recovery of the native biota and inter-dependent processes is unlikely in the immediate future, especially without further efforts to prevent and limit threats and support restoration and resilience of the ecological community. (<https://www.dccew.gov.au/>)
